RE: HISTORIC PROPERTY IDENTIFICATION MEMORANDUM AND FINDING OF NO HISTORIC PROPERTIES AFFECTED WITH CONDITIONS FOR THE LEUCADIA STREETSCAPE DRAINAGE IMPROVEMENTS PROJECT, CITY OF ENCINITAS, CALIFORNIA

Dear Mr. Widelski:

The City of Encinitas is proposing to use US Department of Housing and Urban Development (HUD) funding for the Leucadia Streetscape Drainage Improvements Project (project). The project meets the definition of an “undertaking” according to 36 Code of Federal Regulations (CFR) Section 800.16(y). In support of the project, Michael Baker International completed a South Coastal Information Center (SCIC) records search; a literature, aerial photograph, and historical map review; local interested party consultation; Native American Heritage Commission (NAHC) Sacred Lands File search; archaeological field survey; and archaeological sensitivity assessment to determine whether the project could result in adverse effects to historic properties in accordance with Section 106 of the National Historic Preservation Act (NHPA). Based on the results of this historic properties identification report, Michael Baker International recommends a finding of no historic properties affected with conditions. Methods, results, and recommendations are summarized below.

PROJECT DESCRIPTION

The project is located within the North Coast Highway 101 right-of-way in the Leucadia community of the City of Encinitas, California, extending approximately from Jupiter Street on the south to La Costa Avenue on the north (**Attachment 1: Figure 1**). The area of potential effect (APE) is mapped within the *Encinitas, California* USGS 7.5-minute topographic quadrangle map Township 12 South, Range 4 West, Section 33 and Township 13 S Range 4 West, Section 4 (**Attachment 1: Figure 2**). Proposed improvements include a series of subsurface storm drainpipes that will provide additional storage capacity during storm events, thereby reducing the frequency and intensity of flooding events that are common in this area of the North Coast Highway 101 corridor.

The proposed improvements will convey runoff from an approximate 200-acre drainage area within this area of the North Coast Highway 101 corridor. Stormwater flows would continue to be

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

discharged north toward facilities located near Batiquitos Lagoon and South Ponto Beach, as they are conveyed under existing conditions.

Installation of the storm drain system would entail open-cut excavations utilizing a trench box. The construction footprint would be approximately 10 feet in width and up to 35 feet in depth, as detailed below:

- 1,640 linear feet of 18-inch diameter pipe (estimated trenching depth of 5 to 35 feet)
- 2,145 linear feet of 24-inch diameter pipe (estimated trenching depth of 5 to 35 feet)
- 3,345 linear feet of 60-inch diameter pipe (estimated trenching depth of 15 to 25 feet)
- 260 linear feet of 66-inch diameter pipe (estimated trenching depth of 25 to 35 feet)

The proposed storm drainpipes would connect to three existing outfalls at the north end of the alignment near La Costa Avenue: a 24-inch and an 18-inch outlet at the basin west of North Coast Highway 101, and a 24-inch outlet east of North Coast Highway 101. No construction is proposed at these three outfalls.

A junction box (diversion structure) would be constructed upstream of the three outfalls and convey flows from the existing and proposed storm drain system into these three outfalls. This diversion structure would direct flows from storm events to the two western outfalls, which discharge into a series of detention basins adjacent to the Ponto Beach parking lot. These detention basins ultimately drain toward the channel mouth of Batiquitos Lagoon. An existing 24-inch storm drainpipe, which currently drains the project corridor, would be protected in place and would continue to drain the area near Vulcan Avenue and Union Street.

AREA OF POTENTIAL EFFECTS

The APE for the undertaking has been defined as the boundary of the project limits plus the area for construction staging and vehicle traffic outside the project footprint (**Attachment 1: Figure 3**). The vertical APE is 35 feet below the ground surface to encompass the maximum depth of excavation anticipated for the project. The APE is located in an urban area surrounded by existing development.

SETTING

ENVIRONMENTAL SETTING

California is divided into 11 geomorphic provinces, each defined by unique geologic and geomorphic characteristics. The APE is located in the southwestern portion of the Peninsular Ranges, which is separated by northeast-trending valleys, subparallel to faults branching from the San Andreas Fault with granitic rock intruding the older metamorphic rocks (CGS 2002). The Peninsular Ranges are bound on the east by the Colorado Desert and the Pacific Ocean on the west.

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

The geology of the APE consists of old paralic deposits, Units 6 and 7, which date to the Middle Pleistocene – Late Pleistocene (0.774 – 0.0117 mya) (Kennedy and Tan 2007). The deposits are poorly sorted, moderately permeable, reddish-brown, interfingered strandline, beach, estuarine and colluvial deposits composed of siltstone, sandstone, and conglomerate. These deposits rest on the 22-23 m Nestor Terrace (Unit 6) and 9-11 m Bird Rock Terrace (Unit 7).

The soils in the APE have been mapped as consisting of 10.4 acres (93.9 percent of APE) of Marina loamy coarse sand with 2 to 9 percent slopes (MIC), 0.5 acres (4.8 percent of APE) of Marina loamy coarse sand with 9 to 30 percent slopes (MIE), and 0.1 acres (1.3 percent of APE) of Terrace escarpments (TeF) (NRCS 2023). The Marina soils have grayish brown and brown, slightly and moderately acid, loamy sand A horizons; light brown, moderately and strongly acid, loamy sand B2 horizons with lamellae; and light brown and pink, moderately acid C horizons (USDA 2001).

The APE is within the Diegan Coastal Hills and Valleys ecoregion, located on the western side of the Peninsular Ranges, stretching from the Santa Ana River to the Mexican border. It consists of coastal terraces and some moderately steep to steep foothills, and is characterized by numerous canyons and a few wide valleys. The soil temperature regime is thermic, and the soil moisture regime is xeric. Vegetation in the area includes coastal scrub, chaparral, annual and perennial grasslands, and some small pockets of coastal oak woodlands. The ocean influences the climate, and the ecoregion has experienced some urban and suburban growth in recent years (Griffith et al. 2016).

CULTURAL SETTING

The prehistoric and historic cultural setting for the project's region is briefly outlined below. For its wider context, see more detailed discussions of prehistoric archaeology (Jones and Klar 2007; Moratto 1984), ethnography (Heizer 1978; Kroeber 1925), and history (Pourade 1960-1977; Pryde 2004).

Prehistoric Archaeology

The prehistory of San Diego County has most frequently been divided chronologically into three or four major periods. Generally accepted divisions include a Terminal Pleistocene/Early Holocene period (ca. 12,000-6000 BC), a Middle/Late Holocene period (ca. 6000 BC-AD 800), and a Late Prehistoric period (ca. AD 800-1769).

The earliest chronologically distinctive archaeological evidence is the Clovis pattern for the Terminal Pleistocene/Early Holocene period (ca. 12,000-6000 BC). Dated elsewhere in North America to around 11,500 BC, Clovis assemblages are distinguished primarily by large fluted projectile points. At least three isolated fluted points have been reported in San Diego County (Davis and Shutler 1969; Kline and Kline 2007; Rondeau, Cassidy, and Jones 2007). The most widely recognized archaeological pattern within this period is termed San Dieguito and has been dated from at least as early as 8500 BC to perhaps around 6000 BC (Rogers 1966; Warren 1966; Warren, Siegler, and Dittner 2008). Proposed characteristics to distinguish San Dieguito flaked lithic

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

assemblages include large projectile points, bifaces, crescents, scraper planes, scrapers, hammers, and choppers. A key issue has concerned ground stone, originally suggested as having been absent from San Dieguito components but which has subsequently been recognized as infrequently occurring within them. It was initially suggested that San Dieguito components, like other Paleo-Indian manifestations, represented the products of highly mobile groups organized as small bands and focused on hunting large game. However, in the absence of supporting faunal evidence, this interpretation has increasingly been called into question, and it has been suggested that the San Dieguito pattern represented a more generalized, Archaic-stage lifeway rather than a true Paleo-Indian adaptation. A vigorous debate has continued for several decades concerning the relationship between the San Dieguito and the La Jolla pattern that succeeded and may have been contemporaneous with or even antecedent to it (e.g., Gallegos 1987; Warren, Siegler, and Dittner 2008). The issue has been whether the two patterns represent the products of distinct ethnic groups, cultural traditions, or different functional poses of the same people.

Archaeological evidence from the Middle/Late Holocene period (ca. 6000 BC-AD 800) in the coastal San Diego region has been characterized as belonging to the Archaic stage, Millingstone horizon, Encinitas tradition, or La Jolla pattern (Moratto 1984; Rogers 1945; Wallace 1955; Warren 1968; Warren, Siegler, and Dittner 2008). Distinctive characteristics of the La Jolla pattern include extensive shell middens, portable ground stone metates and manos, crudely flaked cobble tools, occasional large expanding-stemmed projectile points (Pinto and Elko forms), and flexed human burials. Investigators have called attention to the apparent stability and conservatism of the La Jolla pattern throughout this long period (Hale 2009; Sutton and Gardner 2010; Warren 1968; Sutton 2010).

The Late Prehistoric period (ca. AD 800-1769) in coastal San Diego County has been distinguished primarily based on three major innovations: the use of small projectile points, brownware pottery, and the practice of human cremation. Labels applied to the archaeological manifestations of this period include San Luis Rey and Palomar. Traits characterizing the Late Prehistoric period include a shift toward greater use of inland rather than coastal settlement locations, greater reliance on acorns as an abundant but labor-expensive food resource, a greater emphasis on the hunting of both large and small game, a greater amount of interregional exchange, more elaboration of nonutilitarian culture, and possibly denser regional populations (McDonald and Eighmey 2008; Christenson 1990).

Ethnographic Evidence

The APE is at the intersection of two distinct ethnohistoric populations. The northwestern portion of San Diego County was and still is occupied by speakers of a Uto-Aztecan (Takic) language who call themselves Payómkawichum. The Spanish colonizers began calling the Payómkawichum San Luiseños and, later, just Luiseños, given their proximity to the San Luis Rey Mission. The northwestern segment of this group are the Acjhachemen. The Spanish missionaries called them the Juaneño in association with the Mission San Juan Capistrano. Luiseño territory extended from

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

Agua Hedionda Lagoon, Escondido, and Lake Henshaw northward into southern Orange and Riverside Counties.

The central and southern portion of San Diego County was occupied by speakers of a Yuman language(s), variously referred to as Kumeyaay, Diegueño, Tipai, and Ipai. Kumeyaay territory extended from south of Agua Hedionda Lagoon, Escondido, and Lake Henshaw to south of Ensenada in northern Baja California and east nearly as far as the lower Colorado River. A few important ethnohistoric accounts of the Kumeyaay are available from Hispanic-period explorers, travelers, Spanish administrators, and Franciscan missionaries (Fages 1937; Geiger and Meighan 1976; Laylander 2010). Many ethnographer accounts, primarily recorded during the early twentieth century, are also available (Almstedt 1982; Drucker 1937, 1941; Gifford 1918, 1931; Hicks 1963; Hohenthal 2001; Laylander 2004; Luomala 1978; Shipek 1982, 1991; Spier 1923; Waterman 1910).

The Juaneño, Luiseño, and Kumeyaay inhabited a diverse environment, including littoral, valley, foothill, and mountain resource zones. Because of the early incorporation of coastal Luiseño into the mission system, most twentieth-century ethnographic information relates to inland groups living in the Peninsular Ranges. Acorns were essential, but many other mineral, plant, and animal resources were exploited, including coastal fish and shellfish (Shipek 1991; Hedges 1986; Wilken 2012). Some residential mobility seems to have been practiced; the classic fission/fusion pattern involved annual seasonal shifts between consolidated winter and spring settlements in the upper San Luis Rey River valley and smaller, dispersed groups living on Palomar Mountain in the summer and fall. The fundamental Luiseño social units above the family were patrilineal, patrilocal lineages, and clans or tribelets, which ideally coincided with the winter-spring villages. Hereditary leaders performed ceremonial, advisory, and diplomatic functions rather than judicial, redistributive, or military ones. There seems to have been no national level of political unity and perhaps little sense of commonality within the language groups.

Juaneño, Luiseño, and Kumeyaay material culture was effective but not highly elaborated. Structures included houses with excavated floors, ramadas, sweathouses, ceremonial enclosures, and acorn granaries. Hunting equipment included bows and arrows, curved throwing sticks, nets, and snares, as well as nets and hooks of bone and shell for fishing. Processing and storage equipment included a variety of flaked stone tools, milling implements, ceramic vessels, and baskets. Nonutilitarian culture was not neglected. A range of community ceremonies was performed, with particular emphases placed on making individuals' coming of age and on death and mourning. Oral literature included, in particular, an elaborate creation myth shared with other Yuman groups and with Takic speakers (Luiseño, Cupeño, Cahuilla, and Serrano) to the north (Kroeber 1925; Laylander 2001; Waterman 1909).

History

European exploration of the San Diego area was initiated with the maritime expeditions of Juan Rodriguez Cabrillo in 1542 and Sebastián Vizcaíno in 1602 (Pourade 1960). However, the Historic

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

period proper did not begin until 1769, when expeditions under the leadership of Gaspar de Portolá and Junípero Serra reached the region from Baja California and passed northward along the coastal plain to seek Monterey. That year, a royal presidio and the Misión San Diego de Alcalá were founded. The mission was later moved east of the presidio. During a Kumeyaay uprising in 1775, the mission was burned, and a Franciscan missionary was killed (Carrico 1997). However, the uprising was soon suppressed. Additional missions were founded among the Luiseño/Juaneño at San Juan Capistrano in 1776 and San Luis Rey de Francia in 1798.

In 1821, Mexico consummated its independence from Spain, and the region became more open to outside visitors and influences (Pourade 1961). The missions were secularized in 1833. Native Americans released from the San Luis Rey and San Juan Capistrano missions returned to their native villages, moved east to areas beyond Mexican control, or sought work on ranchos or in the towns of San Diego and Los Angeles. Numerous large land grants were issued to private owners during the Mexican period.

The conquest and annexation of California by the United States in the Mexican-American War between 1846 and 1848 ushered in many more changes (Pourade 1963, 1964, 1965, 1967, 1977; Pryde 2004). Many Californio families lost their lands to outsiders, and cultural patterns brought by immigrants from the eastern US gradually supplanted old Californio customs. The region experienced cycles of economic and demographic booms and busts. Aspects of development included the creation of transportation networks based on port facilities, railroads, highways, and airports; more elaborate systems of water supply and flood control; grazing livestock and growing a changing array of crops; supporting military facilities, including the extensive Camp Pendleton facility established in 1942; limited amounts of manufacturing; and accommodating visitors and retirees. After false starts, San Diego became a substantial city and eventually a metropolis (Pryde 2004).

CULTURAL RESOURCES IDENTIFICATION METHODS

The results of the SCIC records search, archival research, literature, historical map, aerial photograph review, field survey, local interested party consultation, NAHC Sacred Lands File search and consultation log, and archaeological site sensitivity analysis are presented below.

SOUTH COASTAL INFORMATION CENTER RESULTS

The SCIC conducted a record search of the APE and a half-mile radius on February 20, 2023. The SCIC, as part of the California Historical Resources Information System, an affiliate of the California Office of Historic Preservation (OHP) and the State Historic Resources Commission, is the official state repository of cultural resources records and reports for San Diego County. Michael Baker International supplemented this search with available online databases maintained by federal and state repositories. As part of the records search, the following federal and California inventories were reviewed:

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

- National Register of Historic Places (National Register) (National Park Service 2023)
- California Inventory of Historic Resources (OHP 1976)
- California Points of Historical Interest (OHP 2023a)
- California Historical Landmarks (OHP 2023a)
- Archaeological Determinations of Eligibility (OHP 2012). The directory includes the OHP eligibility determinations for archaeological resources in San Diego County.
- Built Environment Resource Directory for San Diego County (OHP 2023b). The directory includes resources reviewed for eligibility for the National Register and the California Historical Landmarks programs through federal and state environmental compliance laws and resources nominated under federal and state registration programs, including the National Register, California Register of Historical Resources (California Register), California Historical Landmarks, and California Points of Historical Interest.

Previous Studies

The records search indicated that 41 cultural resources studies have been conducted within a half-mile radius of the APE, and 11 of those studies address all or portions of the APE (**Table 1**). The entirety of this project’s APE has previously been surveyed.

Previously Recorded Resources

The SCIC record search indicated that no cultural resources were previously recorded within the project footprint or the defined APE. However, nine prehistoric sites and two historic buildings were identified within one-half mile of the APE. The closest site to the APE is CA-SDI-23159, a prehistoric lithic scatter located approximately 60 meters east. **Table 2** summarizes the previously recorded cultural resources identified within a half-mile search radius of the project.

Table 2: Previously Documented Cultural Resources Within 0.5 Miles of the APE

Results

The 1881 plat map shows the APE without substantially large land grants, and the General Land Office Records do not have any land patents or sales listed for Section 4 (GLO 1881). The California Railroad is visible on the 1893 topo, which is unsurprising given that construction on the track from National City to Oceanside began in 1881 (LeucadiaTownCouncil.org 2023). On the 1901 topo, the town of Leucadia is identified as Merle and is identified with this name on the topographic maps until 1948. The 1947 aerial shows much of the area surrounding the northern APE as undeveloped, with small houses dotting the western edges of the APE. By 1978, the historic aerial shows the majority of the areas surrounding the APE as developed with residential and commercial spaces.

INTERESTED PARTIES CONSULTATION

Historical Society Consultation

On February 24, 2023, Michael Baker International staff emailed the Encinitas Historical Society to request information and to identify any concerns regarding historic properties within the APE. The historical society has not yet responded. A copy of the correspondence is provided in **Attachment 3**.

Native American Consultation

On February 9, 2023, Michael Baker International requested a search of the NAHC Sacred Lands File. The NAHC responded in a letter dated March 13, 2023, that the Sacred Land Files search results were negative. The NAHC also provided a list of Native American tribal contacts who may have knowledge about and interest in traditional cultural properties located within the project vicinity.

Per HUD guidelines, consultation invitations were sent on March 28, 2023, via email by Michael Baker International staff on behalf of the City to tribal contacts identified in the NAHC lists. Tribal contacts were directed to contact James Daniels at Michael Baker International or Jill Bankston, Director of Engineering/City Engineer at the City of Encinitas Engineering Department, for further Section 106 consultation. **Table 3** provides a summary of all Native American correspondence to date. **Attachment**

CULTURAL RESOURCES SURVEY

Survey Methods

Michael Baker International Senior Archaeologist James T. Daniels, Jr. MA, RPA conducted an archaeological pedestrian survey of the APE on March 3 and March 16, 2023. Native American monitors Jeremy Clay and Demetrius Williams from the San Pasqual Band of Mission Indians also participated in the survey of the APE. The undeveloped portions of the APE were intensively surveyed.

Before the pedestrian survey, a map was created in ArcGIS Online that includes the APE and GIS feature classes, including point, line, and polygon features for collecting data in the field. The maps were then downloaded in Esri's Field Maps app on Apple iPads and coupled via Bluetooth with a Trimble DA2 Catalyst GNSS GPS receiver with submeter accuracy. The field crews used the tablets and GPS units to accurately locate and survey the APE and map newly discovered cultural resources. Photographs of features, artifacts, and overviews were attached to GIS points, lines, and polygons recorded in the field and remained attached to the GIS feature classes in the companion geodatabase submitted with this report. After the fieldwork, this information was imported into Esri's ArcGIS Pro to create digital maps.

The pedestrian survey was a non-collection survey. Artifacts were recorded in the field using appropriate descriptions, drawings, and photos to facilitate interpretations of site character. All resources were recorded using DPR 523 series forms to OHP standards. Site recording included defining site boundaries, features, and formed artifacts. Detailed sketch maps demonstrating the relationship of the location of each resource to topographic features and other landmarks were

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

prepared. Digital photographs documented the environmental associations, specific features, and the general character of the survey area.

A daily survey summary form was completed at the end of the survey to convey the conditions of the survey area and summarize survey findings. This form included a description of vegetation cover (including contextual photographs), as well as estimates of ground surface visibility, rated as poor (0-25 percent), fair (26-50 percent), good (51-75 percent), or excellent (76-100 percent). Evidence for buried cultural deposits was opportunistically sought by inspecting natural or artificial erosional exposures and the spoils from rodent burrows. In the daily survey notes, the archaeologists assessed the potential for buried sites based on geomorphology.

Survey Results

The APE was well developed except for the median on North Coast Highway 101 (**Photo 1**) and the dirt parking strip east of the road between the railroad tracks likely to be used for construction staging (**Photo 2**). The remainder of the APE consisted of the paved North Coast Highway and the adjoining sidewalk west of the highway. Visibility was fair in the median and dirt strip east of the highway, with approximately 35 percent ground visibility.

During the survey, three prehistoric isolate artifacts and one historic isolate artifact were identified on the peripheries of the APE (**Figure 4**). The prehistoric isolates include one bipolar percussion flake (P-37-040568), one piece of lithic reduction shatter (P-37-040570), and one denticulated modified cobble tool (P-37-040571). The historic isolate (P-37-040569) consists of three closely spaced, possibly historic/possibly modern artifacts, including a brick fragment, a piece of cut bone, and a painted ceramic shard. These artifacts were identified in disturbed contexts on the east side of North Coast Highway. See **Attachment 5** for the DPR 523 primary records for the recorded isolates.

EVALUATION

Isolates are inherently ineligible for the National Register because they lack context and, therefore, integrity. Additionally, their data potential may be exhausted from the recordation. P-37-040568, P-37-040569, P-37-040570, and P-37-040571 are not eligible for the National Register. No historic properties were identified within the APE during the survey.

BURIED ARCHAEOLOGICAL SITE SENSITIVITY ANALYSIS

Sensitivity for buried archaeological deposits is medium. Evidence of human activity has been identified on the surface of the APE, and previously recorded prehistoric sites have been identified in the vicinity of the APE. However, given the history of major ground disturbance within the APE, including road building, mass grading, utility installation, and building construction and demolition, it is anticipated that the majority of the APE has been disturbed by past ground disturbance; if any buried deposits are identified, their integrity is likely to have been compromised.

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

SUMMARY OF FINDINGS AND RECOMMENDATIONS

The SCIC records search, historical society consultation, and literature and map review identified no previously recorded historic properties or unevaluated cultural resources within the APE. Three prehistoric isolates and one historic isolate were identified within the APE and were documented on appropriate DPR 523 series forms. Isolates, by definition, lack integrity and are not significant or eligible for the National Register. The NAHC Sacred Lands File search provided positive results. Native American consultation is documented to date in this document and is ongoing. The consultation log will be updated accordingly until the close of the consultation.

Additionally, sensitivity for buried archaeological sites is considered medium based on previously recorded archaeological sites within the vicinity and the identification of isolates on the surface of the APE. Thus, there is potential to disturb previously unknown archaeological resources during project construction, and project excavations have the potential to destroy and otherwise have an adverse effect on previously unidentified buried archaeological resources.

Based on the results of this historic properties identification report, Michael Baker International recommends a finding of no historic properties affected with conditions. Impacts to unanticipated cultural resources may be avoided or reduced by implementing the following mitigation measures:

Cultural Resources Monitoring Program. Prior to the commencement of any ground-disturbing activities, a Cultural Resource Mitigation Monitoring Program shall be established to provide for the identification, evaluation, treatment, and protection of any cultural resources that are affected by or may be discovered during the construction of the proposed project. The monitoring shall consist of the full-time presence of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for "pre-historic" (i.e., pre-contact) and historic archaeology. Further, a Native American monitor from a tribe that is traditionally and culturally affiliated (TCA) with the project area shall be retained to monitor all ground-disturbing activities associated with project construction, including vegetation removal, clearing, grading, trenching, excavation, or other activities that may disturb the original (pre-project) ground, including the placement of imported fill materials and related roadway improvements (i.e., for access).

- The requirement for cultural resource mitigation monitoring shall be noted on all applicable construction documents, including demolition plans, grading plans, etc.
- The qualified archaeologist and each TCA Native American monitor shall attend all applicable preconstruction meetings with the contractor and/or associated subcontractors.
- Monitors shall be given at least 72 hours' notice of the initiation of construction and be kept reasonably apprised of changes to the construction schedule. In the event that a

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

monitor is not present at the scheduled time, work can continue without the monitor present, as long as the notice was given and documented.

During Construction

- The qualified archaeologist shall maintain ongoing collaborative consultation with the TCA Native American monitor during all ground-disturbing or altering activities, as identified above.
- The qualified archaeologist and/or TCA Native American monitor shall have the authority to temporarily halt ground-disturbing activities if archaeological artifact deposits or cultural features are discovered. In general, if subsurface deposits believed to be cultural or human in origin are discovered during construction, all work shall halt within a 100-foot radius of the discovery and ground-disturbing activities shall be temporarily directed away from these deposits to allow a determination of potential significance, the subject of which shall be determined by the qualified archaeologist and the TCA Native American monitor. Ground-disturbing activities shall not resume until the qualified archaeologist, in consultation with the TCA Native American monitor, deems the cultural resource or feature has been appropriately documented and/or protected.
- If the professional archaeologist determines with full agreement from the TCA monitor that the find does not represent a cultural resource, work may resume immediately and no agency notifications are required.
- The avoidance and protection of discovered unknown and significant cultural resources and/or unique archaeological resources is the preferable mitigation for the proposed project. If avoidance is not feasible, a Data Recovery Plan will be required. If a Data Recovery Plan is required, then the TCA Native American monitor shall be notified and consulted in drafting and finalizing any such recovery plan.
- The qualified archaeologist and/or TCA Native American monitor may also halt ground-disturbing activities around known archaeological artifact deposits or cultural features if, in their respective opinions, there is the possibility that they could be damaged or destroyed.
- The City shall relinquish ownership of all tribal cultural resources collected during the cultural resource monitoring conducted during all ground-disturbing activities to the TCA Native American tribe for respectful and dignified treatment and disposition, including reburial, in accordance with the tribe's cultural and spiritual traditions. All cultural materials that are associated with burial and/or funerary goods will be

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

repatriated to the most likely descendant as determined by the Native American Heritage Commission per California Public Resources Code Section 5097.98.

- Upon completion of monitoring activities, a Final Monitoring Report, which describes the results, analysis, and conclusions of the cultural resource mitigation monitoring efforts, shall be prepared by the qualified archaeologist and retained by the City.

Inadvertent Discovery of Human Remains. As specified by California Health and Safety Code Section 7050.5, if human remains are found on the project site during construction or during archaeological work, the person responsible for the excavation, or his or her authorized representative, shall immediately notify the San Diego County Coroner's office by telephone. No further excavation or disturbance of the discovery or any nearby area reasonably suspected to overlie adjacent remains (as determined by the qualified archaeologist and/or the TCA Native American monitor) shall occur until the coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code 5097.98. If such a discovery occurs, a temporary construction exclusion zone shall be established surrounding the area of the discovery so that the area would be protected (as determined by the qualified archaeologist and/or the TCA Native American monitor), and consultation and treatment could occur as prescribed by law. As further defined by state law, the coroner shall determine within two working days of being notified if the remains are subject to his or her authority. If the coroner recognizes the remains to be Native American, he or she shall contact the Native American Heritage Commission (NAHC) within 24 hours. The NAHC shall make a determination as to the most likely descendent. If Native American remains are discovered, the remains shall be kept in situ ("in place"), or in a secure location in close proximity to where they were found, and the analysis of the remains shall only occur on-site in the presence of the TCA Native American monitor.

PREPARER QUALIFICATIONS

Michael Baker International Archaeologists James T. Daniels, Jr. prepared this memorandum. Senior Cultural Resources Manager Margo Nayyar, MA reviewed the memorandum for quality assurance.

James T. Daniels, Jr. MA, RPA, Senior Archaeologist, has cultural resource management experience in California, Nevada, and North Carolina. His experience includes archaeological surveys, evaluations of historic and prehistoric sites for listing in the California and National Registers, site mitigation data recoveries, mitigation monitoring, and preparation of archaeological resource management reports and cultural resources technical reports. As a senior archaeologist, he supports projects needing CEQA, NEPA, NHPA, Section 106, NAGPRA, Assembly Bill 52, US Army Corps of Engineers 404 permits, and local cultural resource regulation compliance. He assists with environmental impact statements and reports and alternative mitigation measures for clients, including interpretive signage, informative website design, brochures, and ethnographic studies. He also assists in Native American consultation and coordination of Native American monitoring. Mr. Daniels provides advanced technical services for clients, including

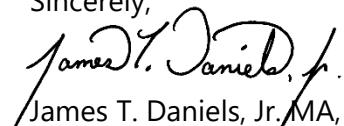

MICHAEL BAKER INTERNATIONAL

RE: Historic Property Identification Report and Finding of No Historic Properties Affected with Conditions for the Leucadia Streetscape Drainage Improvements Project, City of Encinitas, California

geophysical surveys with ground-penetrating radar (GPR), obsidian and ceramic sourcing using portable X-ray fluorescence (pXRF), photogrammetry, and GIS predictive modeling and data collection using Esri Field Maps.

Margo Nayyar, MA, Senior Cultural Resources Manager, is a senior architectural historian with 13 years of cultural management experience in California, Nevada, Arizona, Idaho, Texas, and Mississippi. Her experience includes built environment surveys, evaluation of historic-era resources using guidelines outlined in the National and California Registers, and preparation of cultural resources technical studies pursuant to CEQA and Section 106 of the NHPA, including identification studies, finding of effect documents, memorandum of agreements, programmatic agreements, and Historic American Buildings Survey/Historic American Engineering Record/Historic American Landscapes Survey mitigation documentation. She prepares cultural resources sections for CEQA environmental documents, including infill checklists, initial studies, and environmental impact reports, as well as NEPA environmental documents, including environmental impact statements and environmental assessments. She also specializes in municipal preservation planning, historic preservation ordinance updates, Native American consultation, and provision of Certified Local Government training to interested local governments. She develops Survey 123 and Esri Collector applications for large-scale historic resources surveys, and authors National Register nomination packets. Ms. Nayyar meets the Secretary of the Interior’s Professional Qualification Standards for history and architectural history.

Sincerely,

James T. Daniels, Jr., MA, RPA
Senior Archaeologist

Historical Society Consultation

I N T E R N A T I O N A L

February 24, 2023

Carolyn Cope, President
Encinitas Historical Society
390 W. F Street
Encinitas, CA 92024
Via email: info@encinitashistoricalsociety.org

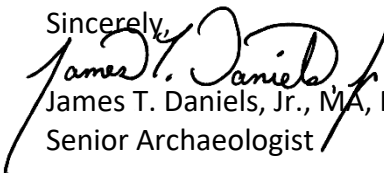

**Re: North Leucadia Drainage Improvements – La Costa Avenue to Grandview Street
(Alternative 6)**

Dear Ms. Cope:

Michael Baker International is conducting a cultural resources study supporting the North Leucadia Drainage Improvement Project (project) in Encinitas, CA. The project is located along North Coast Highway 101 in Encinitas, California, and is associated with the larger North Coast Highway 101 Streetscape Improvement Project and would affect an area from just north of La Costa Avenue (approximate northern extent) to Basil Street (approximate southern extent). The City of Encinitas (City) is conducting an environmental review on plans to enhance the existing storm drain system by providing additional storage capacity during storm events, thereby reducing the frequency of existing flooding events within the North Coast Highway 101 corridor. The storm drain system would be designed to convey runoff from the drainage area west of the North County Transit District Railroad tracks, north of Basil Street, and south of a point just north of La Costa Avenue. The overall tributary drainage area totals approximately 200 acres. Stormwater flows would continue to be discharged north toward existing facilities near the Batiquitos Lagoon following the construction of the intended improvements. The project is subject to Section 106 of the National Historic Preservation Act. Previous work has already evaluated the project under the California Environmental Quality Act.

We are contacting you to identify cultural resources the proposed project may impact. Please notify us if your organization has any information or concerns about historical resources on the project site. This letter is not a research request; it is solely a request for public input related to any concerns the Encinitas Historical Society may have. If you have any questions or comments, contact me at your earliest convenience at james.daniels@mbakerintl.com or 760-208-0583. Thank you for your time and assistance.

Sincerely,

James T. Daniels, Jr., MA, RPA
Senior Archaeologist

Native American Heritage Commission Sacred Lands File Search Results and Native American Consultation

February 9, 2023

Laura Miranda
California Native American Heritage Commission
1550 Harbor Blvd., Suite 100
West Sacramento, CA 95691
nahc@nahc.ca.gov

Re: Cultural Resources Inventory for the North Leucadia Drainage Improvements Project, Encinitas, California

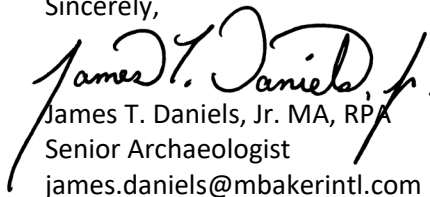

Dear Chairperson Miranda,

Michael Baker International is conducting a cultural resources inventory for the proposed North Leucadia Drainage Improvements Project located along North Coast Highway 101 in Encinitas, California, and is associated with the larger North Coast Highway 101 Streetscape Improvement Project. The cultural resources inventory will be conducted in compliance with Section 106 of the National Historic Preservation Act. The North Leucadia Drainage Improvements Project would affect an area from just north of La Costa Avenue (approximate northern extent) to Basil Street (approximate southern extent). Improvements proposed with the Storm Drain Improvement Project are intended to enhance the existing storm drain system by providing additional storage capacity during storm events, thereby reducing the frequency of existing flooding events within the North Coast Highway 101 corridor. The storm drain system would be designed to convey runoff from the drainage area west of the North County Transit District Railroad tracks, north of Basil Street, and south of a point just north of La Costa Avenue. The overall tributary drainage area totals approximately 200 acres. Stormwater flows would continue to be discharged north toward existing facilities near the Batiquitos Lagoon following the construction of the intended improvements.

Michael Baker International requested a records search with the South Coastal Information Center and is waiting for the results. I am writing to request a search of the Sacred Lands File and to inquire if you have registered any cultural resources, traditional cultural properties, or areas of heritage sensitivity within this proposed project area.

We would also like to request a list of Native American tribes that may have knowledge of cultural resources in the project area or who may wish to be notified of the investigation. Please submit your response to me via e-mail at jdaniels@asmaffiliates.com.

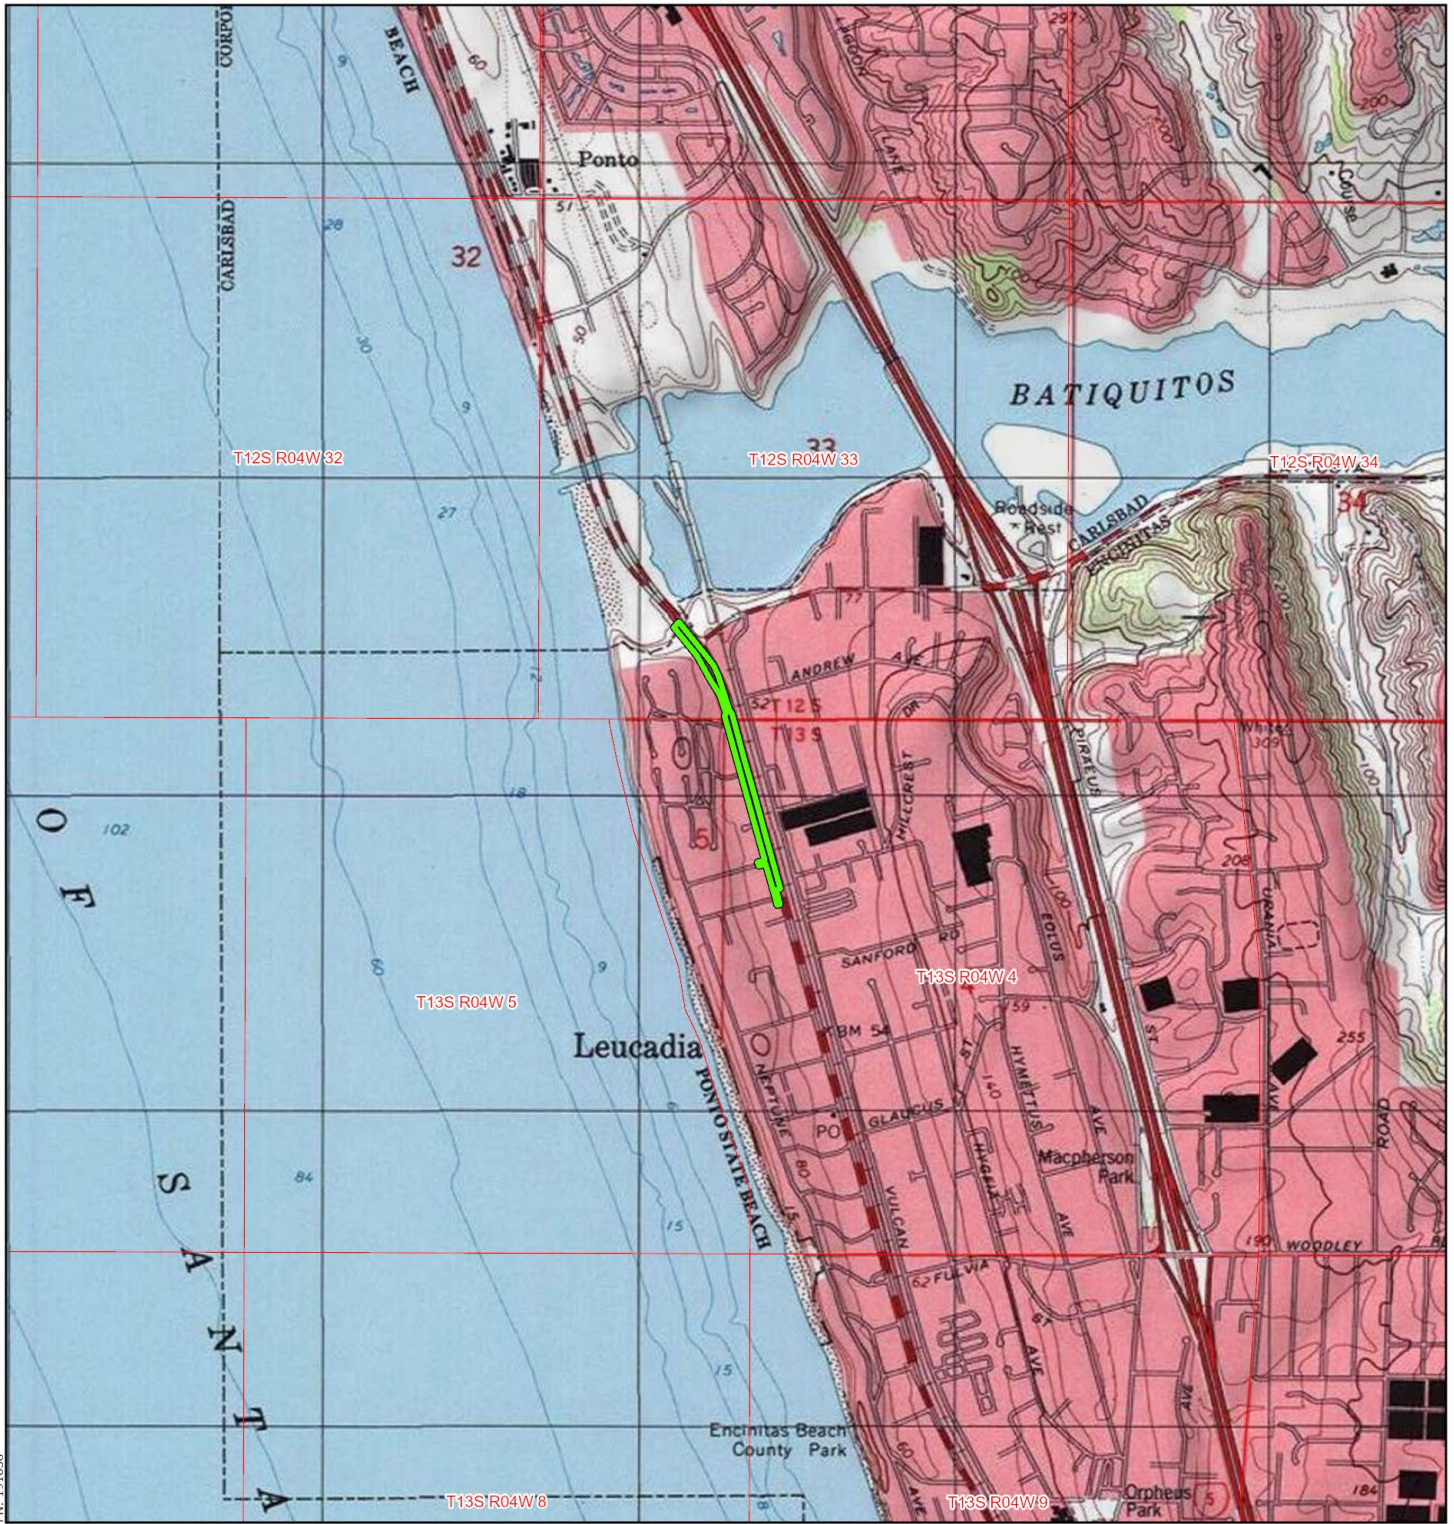

Sincerely,

James T. Daniels, Jr. MA, RPA
Senior Archaeologist

NATIVE AMERICAN HERITAGE COMMISSION

March 13, 2023

James Daniels
Michael Baker International

Via Email to: james.daniels@mbakerintl.com

Re: North Leucadia Drainage Project, San Diego County

Dear Mr. Daniels:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

Pricilla Torres-Fuentes
Cultural Resources Analyst

SUBJECT: Leucadia Streetscape Drainage Improvements Project

Dear Chairperson Lawson,

The City of Encinitas proposes the Leucadia Streetscape Drainage Improvements Project (project), located within the North Coast Highway 101 right-of-way in the Leucadia community of the City of Encinitas, California (Figures 1 and 2). The project extends from Jupiter Street on the south to La Costa Avenue on the north. Proposed improvements include a series of subsurface storm drain pipes that will provide additional storage capacity during storm events, thereby reducing the frequency and intensity of flooding events common in this area of the North Coast Highway 101 corridor.

The City of Encinitas is considering funding the project with federal funds from the U.S. Department of Housing and Urban Development (HUD). Under HUD regulation 24 CFR 58.4, the City of Encinitas has assumed HUD's environmental review responsibilities for the project, including tribal consultation related to historic properties. Historic properties include archeological sites, burial grounds, sacred landscapes or features, ceremonial areas, traditional cultural places and landscapes, plant and animal communities, and buildings and structures with significant tribal association.

The City of Encinitas is conducting a review of this project to comply with Section 106 of the National Historic Preservation Act and its implementing regulations 36 CFR Part 800. On February 9, 2023, Michael Baker International requested a search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF). The NAHC responded in a letter dated March 13, 2023, that the SLF search results were negative. The NAHC also provided a list of Native American tribal contacts who may know of cultural resources in the project area. The NAHC has identified you as a member of a California Native American tribe traditionally and culturally affiliated with the project's geographic area. We would like to invite you to be a

consulting party in this review to help identify historic properties in the project area that may have religious and cultural significance to your tribe and, if such properties exist, to help assess how the project might affect them. If the project might have an adverse effect, we would like to discuss possible ways to avoid, minimize or mitigate potential adverse effects.

Michael Baker International has been contracted to conduct a cultural resources inventory for the project and has obtained the following information. A record search from the South Coastal Information Center indicated that no cultural resources were previously recorded within the project footprint. However, nine prehistoric sites and two historic buildings were identified within one-half mile of the project. The closest site to the project is CA-SDI-23159, a prehistoric lithic scatter located approximately 60 meters east of the project. Table 1 summarizes the previously recorded cultural resources identified within a half-mile search radius of the project.

TABLE 1. PREVIOUSLY RECORDED CULTURAL RESOURCES WITHIN A HALF-MILE RADIUS

Primary No.	Trinomial	Site Attributes	Proximity to APE in meters (m)	Recorder/Firm/Year	Evaluation Status
P-37-000603	CA-SDI-000603	AP02 (Lithic scatter) AP03 (Ceramic scatter) AP09 (Burials) AP16 (Other) - shell; beads	777 m	J. O'Conner – ECORP (2020) D. Laylander – ASM Affiliates (2003) C.N. Warren (1959)	Evaluated and recommended eligible for NRHP* and CRHR**
P-37-009589	CA-SDI-009589	AP02 (Lithic scatter) AP15 (Habitation debris) AP16 (Other) - shell; bone	300 m	D. Bell – DPR (1987) J. Woodward & F. Mueller (1982)	Evaluated and recommended ineligible
P-37-011026	CA-SDI-011026	AP02 (Lithic scatter) AP16 (Other) - shell	633 m	T. Van Bueren – INFOTEC Research (1988) R.V. May & C. May (1972)	Un evaluated
P-37-012670	CA-SDI-012670	AP02 (Lithic scatter) AP11 (Hearths/pits) - fire-affected rock AP15 (Habitation debris) AP16 (Other) - shell	688 m	D. Laylander – ASM Affiliates (2003) T. Van Bueren – INFOTEC Research (1988)	Evaluated, eligibility status unknown
P-37-026507	CA-SDI-017403	AP02 (Lithic scatter) AP16 (Other) - shell	629 m	G. Stickel (1978)	Unevaluated
P-37-026508	CA-SDI-017404	AP11 (Hearths/pits) - cobble hearths AP16 (Other) - shell; charcoal	102 m	Unknown	Unevaluated

Information from the South Coastal Information Center received February 20, 20223

* National Register of Historic Places

** California Register of Historic Resources

Michael Baker International Senior Archaeologist James T. Daniels, Jr. M.A., RPA conducted an archaeological pedestrian survey of the project’s Area of Potential Effect (APE) on March 3, 2023, and March 16, 2023. Native American monitors Jeremy Clay and Demetrius Williams from the San Pasqual Band of Mission Indians also participated in the survey of the APE. During the survey, three prehistoric isolate artifacts and one historic isolate artifact were identified on the peripheries of the project footprint. The prehistoric isolates include one bipolar percussion flake, one piece of lithic reduction shatter, and one denticulated modified cobble tool. These artifacts were identified in disturbed contexts on the east side of Coast Highway. These isolated finds are not eligible for listing in the National Register or the California Register.

The proposed improvements associated with the project will convey runoff from an approximate 200-acre drainage area within this portion of the North Coast Highway 101 corridor. Stormwater flows would continue to be discharged north towards facilities located near Batiquitos Lagoon and South Ponto Beach, as they are conveyed under existing conditions.

Installation of the storm drain system would entail open-cut excavations utilizing a trench box. The construction footprint would be approximately 10 feet in width and up to 35 feet in depth, as detailed below:

- 1,640 linear feet of 18-inch diameter pipe (estimated trenching depth of 5 to 35 feet)
- 2,145 linear feet of 24-inch diameter pipe (estimated trenching depth of 5 to 35 feet)
- 3,345 linear feet of 60-inch diameter pipe (estimated trenching depth of 15 to 25 feet)
- 260 linear feet of 66-inch diameter pipe (estimated trenching depth of 25 to 35 feet)

The proposed storm drainpipes would connect to three existing outfalls at the north end of the alignment near La Costa Avenue: a 24-inch and an 18-inch outlet at the basin west of North Coast Highway 101; and a 24-inch outlet east of North Coast Highway 101. No construction is proposed at these three outfalls.

A junction box (diversion structure) would be constructed upstream of the three outfalls and convey flows from the existing and proposed storm drain system into these three existing

Chairperson Lawson
March 28, 2023

outfalls. This diversion structure would direct flows from storm events to the two western outfalls, which discharge into detention basins adjacent to the Ponto Beach parking lot. These detention basins ultimately drain toward the channel mouth of Batiquitos Lagoon. An existing 24-inch storm drain pipe that currently drains the project corridor would be protected in place and continue to drain the area near Vulcan Avenue and Union Street.

To meet project timeframes, if you would like to be a consulting party on this project, please let us know of your interest by April 10, 2023. If you have any initial concerns with impacts of the project on religious or cultural properties, please note them in your response. Please respond to James Daniels at james.daniels@mbakerintl.com or by phone at (760) 208-0583. Also, please do not hesitate to contact the City.

The Viejas Band of Kumeyaay Indians (“Viejas”) has reviewed the proposed project and at this time we have determined that the project site has cultural significance or ties to the Kumeyaay Nation. We recommend that you notify the:

San Pasqual Band of Mission Indians
P.O. Box 365
Valley Center, Ca 92082

Additionally, we request, as appropriate, the following:

- All NEPA/CEQA/NAGPRA laws be followed
- Immediately contact San Pasqual on any changes or inadvertent discoveries.

If you wish to utilize Viejas cultural monitors, please call Ernest Pingleton at 619-655-0410 or email, epingleton@viejas-nsn.gov, for contracting and scheduling. Thank you.

RE: Leucadia Streetscape Drainage Improvements Project

Dear Mr.Daniels,

The San Pasqual Band of Mission Indians Tribal Historic Preservation Office has received your notification of the project referenced above. This letter constitutes our response on behalf of Desiree M. Whitman THPO of the San Pasqual Band of Diegueno Indians.

We have consulted our maps and determined that the project as described is not within the boundaries of the recognized San Pasqual Indian Reservation. It is, however, within the boundaries of the territory that the tribe considers its Traditional Use Area (TUA). Furthermore, As the project progresses, we would like to engage in formal government-to-government consultation under Section 106/ CEQA so that San Pasqual can have a voice in the development of the measures that will be taken to protect these sites and mitigate any adverse impacts. We would appreciate being given access to any cultural resource reports that have been or will be generated during the environmental review process so we can contribute most effectively to the consultation process.

We appreciate your involvement with your initiative and look forward to working with you on future efforts. If you have questions or need additional information, please do not hesitate to contact me by telephone at 760-651-5142 or angelinag@sanpasqualtribe.org

Sincerely,

Angelina Gutierrez

RE: Formal Request for Tribal Consultation Pursuant to the California Environmental Quality Act (CEQA), Public Resources Code section 21080.3.1, subds. (b), (d) and (e) for Leucadia Streetscape Drainage Improvements Project

Dear Mr. Daniels:

This letter constitutes a formal request for tribal consultation under the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21080.3.1 subdivisions (b), (d) and (e)) for Leucadia Streetscape Drainage Improvement Project impacts to tribal cultural resource for the above referenced project. The San Luis Rey Band of Mission Indians requested formal notice and information for all projects within your agency's geographical jurisdiction and received notification on March 28, 2023, regarding the above referenced project.

The San Luis Rey Band of Mission Indians requests consultation on the following topics checked below, which shall be included in consultation if requested (Public Resources Code section 21080.3.2, subd. (a)):

- Alternatives to the project
- Recommended mitigation measures
- Significant effects of the project

The San Luis Rey Band of Mission Indians also requests consultation on the following discretionary topics checked below (Public Resources Code section 21080.3.2 (subd. (a)):

- Type of environmental review necessary
- Significance of tribal cultural resources, including any regulations, policies or standards used by your agency to determine significance of tribal cultural resources

X Significance of the project's impacts on tribal cultural resources

X Project alternatives and/or appropriate measures for preservation or mitigation that we may recommend, including, but not limited to:

- (1) Avoidance and preservation of the resources in place, pursuant to Public Resources Code section 21084.3, including, but not limited to, planning and construction to avoid the resources and protect the cultural and natural context, or planning greenspace, parks or other open space, to incorporate the resources with culturally appropriate protection and management criteria;
- (2) Treating the resources with culturally appropriate dignity taking into account the tribal cultural values and meaning of the resources, including but not limited to the following:
 - a. Protecting the cultural character and integrity of the resource;
 - b. Protection the traditional use of the resource; and
 - c. Protecting the confidentiality of the resource.
- (3) Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
- (4) Protecting the resource.

Additionally, the San Luis Rey Band of Mission Indians requests to receive any cultural resources assessments or other assessments that have been completed on all or part of the project's potential "area of project effect" (APE), including, but not limited to:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:
 - A listing of any and all known cultural resources have already been recorded on or adjacent to the APE;
 - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
 - If the probability is low, moderate, or high that cultural resources are located in the APE.
 - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the potential APE; and
 - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.
2. The results of any archeological inventory survey that was conducted, including:
 - Any report that may contain site forms, site significance, and suggested mitigation measures.All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential

addendum, and not be made available for public disclosure in accordance with Government Code Section 6254.10.

3. The results of any Sacred Lands File (SFL) check conducted through Native American Heritage Commission. The request form can be found at http://www.nahc.ca.gov/slf_request.html. USGS 7.5-minute quadrangle name, township, range, and section required for the search.
4. Any ethnographic studies conducted for any area including all or part of the potential APE; and
5. Any geotechnical reports regarding all or part of the potential APE.

We would like to remind your agency that CEQA Guidelines section 15126.4, subdivision (b)(3) states that preservation in place is the preferred manner of mitigating impacts to archeological sites. Section 15126.4, subd. (b)(3) of the CEQA Guidelines has been interpreted by the California Court of Appeal to mean that “feasible preservation in place must be adopted to mitigate impacts to historical resources of an archeological nature unless the lead agency determines that another form of mitigation is available and provides superior mitigation of impacts.” *Madera Oversight Coalition v. County of Madera* (2011) 199 Cal.App.4th 48, disapproved on other grounds, *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013) 57 Cal.4th 439.

The San Luis Rey Band of Mission Indians expects to begin consultation within 30 days of your receipt of this letter. Please contact the San Luis Rey Band of Mission Indians lead contact person identified in our previous request for notification.

Dear Chairperson Hernandez,

We previously emailed and mail to the Mesa Grande Band of Diegueño Mission Indians information regarding a project that the City of Encinitas is proposing called the Leucadia Streetscape Drainage Improvements Project. We have updated our letter to be addressed to you based on information received from Kimberly Murphy. We have also notified the NAHC that you are the current Chairperson of the Mesa Grande Band of Diegueño Mission Indians.

The project will be supported with federal funds from the U.S. Department of Housing and Urban Development (HUD). The project will provide additional storage capacity during storm events, reducing the frequency and intensity of flooding events common in this area of the North Coast Highway 101 corridor. Attached is a formal invitation to participate in Section 106 consultation. We have also mailed a hard copy of the letter to the address provided by the NAHC via certified mail.

If you would like to be a consulting party on this project to meet project timeframes, please let us know of your interest by May 10, 2023. Please reply to this email or contact me directly at (760) 208-0583.

Dear Mr. Aguilar,

The City of Encinitas proposes the Leucadia Streetscape Drainage Improvements Project with federal funds from the U.S. Department of Housing and Urban Development (HUD). The project will provide additional storage capacity during storm events, reducing the frequency and intensity of flooding events common in this area of the North Coast Highway 101 corridor. Attached is a formal invitation to participate in Section 106 consultation. We have also mailed a hard copy of the letter to the address provided by the NAHC.

If you would like to be a consulting party on this project to meet project timeframes, please let us know of your interest by April 10, 2023. Please reply to this email or contact me directly at (760) 208-0583.

Action Required

Recipient

Unknown To address

How to Fix It

The address might be misspelled or might not exist. Try one or more of the following:

- **Retype the recipient's address, then resend the message** - If you're using Outlook, open this non-delivery report message and click **Send Again** from the menu or ribbon. In Outlook on the web, select this message, and then click the "**To send this message again, click here.**" link located just above the message preview window. In the To or Cc line, delete and then retype the entire recipient's address (ignore any address suggestions). After typing the complete address, click **Send** to resend the message. If you're using an email program other than Outlook or Outlook on the web, follow its standard way for resending a message. Just be sure to delete and retype the recipient's entire address before resending it.
- **Remove the recipient from the recipient Auto-Complete List, then resend the message** - If you're using Outlook or Outlook on the web, follow the steps in the "Remove the recipient from the recipient Auto-Complete List" section of [this article](#). Then resend the message. Be sure to delete and retype the recipient's entire address before clicking **Send**.
- **Contact the recipient by some other means**, (by phone, for example) to confirm you're using the right address. Ask them

Subject: Leucadia Streetscape Drainage Improvements Project
Attachments: Erica Pinto.pdf

Dear Ms. Pinto,

The City of Encinitas proposes the Leucadia Streetscape Drainage Improvements Project with federal funds from the U.S. Department of Housing and Urban Development (HUD). The project will provide additional storage capacity during storm events, reducing the frequency and intensity of flooding events common in this area of the North Coast Highway 101 corridor. Attached is a formal invitation to participate in Section 106 consultation. We have also mailed a hard copy of the letter to the address provided by the NAHC.

If you would like to be a consulting party on this project to meet project timeframes, please let us know of your interest by April 10, 2023. Please reply to this email or contact me directly at (760) 208-0583.

Cordially,

James T. Daniels, Jr., MA, RPA | Senior Archaeologist/Technical Manager I

Action Required

Recipient

Unknown To address

How to Fix It

The email address might be misspelled or it might not exist. Try one or more of the following:

- **Retype the recipient's address, then resend the message** - If you're using Outlook, open this non-delivery report message and click **Send Again** from the menu or ribbon. In Outlook on the web, select this message, and then click the "**To send this message again, click here.**" link located just above the message preview window. In the To or Cc line, delete and then retype the entire recipient's address (ignore any address suggestions). After typing the complete address, click **Send** to resend the message. If you're using an email program other than Outlook or Outlook on the web, follow its standard way for resending a message. Just be sure to delete and retype the recipient's entire address before resending it.
- **Remove the recipient from the recipient Auto-Complete List, then resend the message** - If you're using Outlook or Outlook on the web, follow the steps in the "Remove the recipient from the recipient Auto-Complete List" section of [this article](#). Then resend the message. Be sure to delete and retype the recipient's entire address before clicking **Send**.
