Leucadia Blvd. /I-5 Bridge Rail Repairs Project

Maintaining Safe and Livable communities through well-maintained infrastructure

ABOUT THE PROJECT

The Leucadia Boulevard Bridge was originally installed in DATE. CalTrans provided recommendations in a Bridge Inspection Report in 2022 to repair spalling concrete and rust on the bridge rails.

The Leucadia Boulevard Bridge provides multi-modal access into the City of Encinitas for cars, bicyclists, and pedestrians. Deferral of this work would likely have multi-modal impacts to circulation.

This project aligns with the Community Planning vision of the Strategic Plan by providing safe and livable communities through well-maintained infrastructure and facilities.
